Subject: Please recycle cap&trade revenue back to CA citizens

Dear EAAC,

I support the State's investments into renewable energy and low-emissions vehicles. Such investments should continue through the regular legislative process. We need to reduce greenhouse gases fairly, and return profits back to people if prices go up. The majority of emissions value should be returned directly back to us, the people of California. Do not make our money disappear into the black hole of deficit reduction. Do not give free allocations to utilities on our behalf. Do not give tax cuts to corporations that are lobbying against climate protection through their Chambers of Commerce, or to their millionaire shareholders who may live outside the state. Recycling the revenues back to us will help the people of California buy solar panels, hybrid cars, pay for increased energy bills, and do our part to stimulate the economy and reduce our state's carbon footprint.

California can lead the world with a system based on democratic principles. If we do it right, our AB32 law can influence the pending bill in Congress and the international climate talks in Copenhagen. Thank you.

Sincerely,

John Canfield

San Carlos, CA
